

Exception

```
classDiagram
    class Exception {
    }
    class Yarn_ParseException["Yarn.ParseException"] {
        ~ lineNumber
        ~ ParseException()
        ~ Make()
    }
    Exception <|-- Yarn_ParseException
```

The diagram illustrates a class hierarchy. At the top is the 'Exception' class, represented by a rectangle divided into three horizontal sections. The top section contains the class name 'Exception', while the two bottom sections are empty. Below it is the 'Yarn.ParseException' class, represented by a rectangle divided into three horizontal sections. The top section contains the class name 'Yarn.ParseException', the middle section contains '~ lineNumber', and the bottom section contains '~ ParseException()' and '~ Make()'. A blue arrow with an open triangular head points from the 'Yarn.ParseException' class up to the 'Exception' class, indicating inheritance.

Yarn.ParseException

~ lineNumber

~ ParseException()

~ Make()
